

A technology designed for small-scale farmers

Production of clean and sustainable energy

Sanitation, rural development and food security

Farmer empowerment through energy independence

Uses of biogas

Tata Trust Gujarat Program

In a technology trial in Gujarat with local organization CINI, Sistema.bio was able to show that installing high quality biogas equipment—together with proven installation, training and monitoring methodology—can have a positive impact on the economics, productivity and health of smallholder households.

57
Households equipped
with a digester

2900 L
Of waste treated daily

515
Members benefitting from
clean energy and biofertilizer

2.5 h
Of cooking daily provided
in each household

11 m³
Of biofertilizer produced daily

29 h
Per month saved on wood
collection per household

100%
Of current beneficiaries recommend
the system to their relatives

299
Tons of CO₂
displaced per year

123
Saved per year

35
Engineers, masons, and local workers
trained on installation and O&M
